

#### More Power

Unlike tired amp designs that recycle the same outdated technology, Kick amps incorporate modern circuitry to give you massive wattage in astonishingly lightweight enclosures. Use it as a keyboard amp, drum monitor, electronic percussion amplifier or even as PA system for small to medium-sized gigs. Kick series amplifiers are fine-tuned performance-hungry machines. Their true bi-amped designs pump dedicated power to the LF woofers and HF, so neither gets overworked and neither gets neglected.

#### Better Components

In Kick amps, every component has been optimized for maximum efficiency, giving you an amplifier that sounds amazing, is lightweight, and has everything you need without the filler. Each Kick amp employs a handpicked, custom-tuned crossover that splits your signal with razor-sharp precision and doesn't get in the way. Even the speaker baffle has been designed to direct your sound with precision, holding both the woofer and tweeter at a slight upward angle to accomplish the best throw.

#### Built-in Alesis DSP

Kick amps come packed with 16 genuine Alesis effects, including delay, flanger, chorus and multiple reverbs. Each effect has 16 different variations, giving you a total of 256 effect presets to choose from. FX Level controls are located on all four channels, allowing you to dial in just the right amount of effect on each.
